

ACTIVITY 9 GRADES 6-12

Galerucella PREDATION*

Objective

→ Students will introduce various organisms into a controlled environment to determine potential *Galerucella* predators.

Time Requirement

4-8 weeks.

Education: A.8.1, A.8.2, A.8.3, A.8.4, A.8.5, B.8.8, C.8.2, A.12.1, A.12.2, A.12.4, B.12.4, B.12.6.

Science: A.8.1, A.8.6, B.8.3, C.8.1, C.8.2, C.8.3, C.8.5, C.8.6, C.8.11, F.8.6, F.8.8, G.8.5, A.12.3, A.12.7, B.12.4: A.8.1, A.8.6, B.8.3, C.8.1, C.8.2, C.8.3, C.8.5, C.8.6, C.8.11, F.8.6, F.8.8, G.8.5, A.12.3, A.12.7, B.12.4, C.12.1, C.12.3, F.12.7, F.12.8, G.12.2.

DESCRIPTION

Students conduct experiments to determine predators of and predation rates on *Galerucella* beetles.

PROBLEM

What are some of the predators that may affect the survival rate of *Galerucella* beetles.

MATERIALS

- ☐ Gallon jars or 2-liter bottles of soil.
- ☐ Purple loosestrife plant stems with leaves.
- ☐ *Galerucella* beetles.
- ☐ Various potential *Galerucella* predators.
- ☐ Clear plastic film canisters.
- ☐ Cheese cloth or netting.
- ☐ Magnifying glasses.

PREPARATION

Scout a site near your classroom where your class will be able to catch potential predators of *Galerucella* beetles.

PROCEDURES

1. List potential predators of *Galerucella* beetles. Choose 5-10 predators to be collected to use in this experiment.
2. Have students set up *Galerucella* beetle habitat bottles according to the diagram.
3. Work with students to design a data table for recording observations over the planned duration of the experiment.
4. Maintain one habitat bottle with only *Galerucella* beetles as a control. Establish one habitat bottle for each chosen potential predator, putting one predator into each jar with the *Galerucella* beetles.
5. Maintain each habitat by adding fresh purple loosestrife as needed (leave old stalks in the habitat), filling the water in the canister, or replacing the predator if it perishes.
6. Have students observe each habitat bottle on a regular basis for 1-8 weeks. Record observations.

D. WILDE

Activity 9. *Galerucella* PREDATION

BACKGROUND INFORMATION

Galerucella beetles are plant predators (herbivores). *Galerucella* beetles do not eat other animals, but there are many animals that might eat the *Galerucella* beetles. Not all of the potential predators of *Galerucella* beetles in North America are known. Biologists and resource managers need to know how these beetles will interact with other animals, especially within our wetlands, in order to predict what will happen in areas where the beetles are released. Knowing potential beetle predators also helps keep the beetles safe as they are being reared for release. *Galerucella* beetle predators may include other invertebrates (including other insects), fishes, amphibians, reptiles, birds, and mammals.

STUDENT ASSESSMENT

Have students write a lab report including the problem, hypothesis, experimental design, observations, and conclusions.

EXTENSIONS

Repeat the experiment using only aquatic predators, other invertebrates, or abiotic agents (chemicals or environmental conditions).

Visit a wetland and observe predator/prey relationships on purple loosestrife at a beetle release site.
